

COSMOSSEP-manual

This program can extract acceleration, velocity and displacement from the ground motion file downloaded from the COSMOS virtual data center (<https://www.strongmotioncenter.org/vdc/scripts/default.plx>).

How to use it?

- Run the exe-file
- Enter the input file name
- Enter the time step

There will be four output files:

- Acceleration
- Displacement
- Time
- Velocity
- Combined-all of the above

Note: Please send me the input file if this program does not work.
